

Product Requirements Document (PRD)

Eila Eco Pencils E-Commerce Platform

1. Executive Summary

This PRD defines the functional, business, and user requirements for rebuilding the Eila Eco Pencils website into a production-ready ecommerce platform. The system will support online product discovery, guest checkout, Razorpay payments in INR, administrator management, analytics, inventory, bulk enquiries, and future scalability.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

2. Business Background

Eila Eco Pencils is an eco-friendly stationery brand focused on sustainable products. The previous website became inactive due to operational challenges. The new platform aims to improve online sales, simplify operations, and strengthen the brand.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

3. Problem Statement

Current challenges include lack of online ordering, manual inventory, no analytics, difficult product management, limited SEO, and no centralized admin dashboard.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

4. Product Vision

Create a fast, secure, scalable ecommerce platform that reflects the brand values of sustainability while providing an excellent purchasing experience and simple business management.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

5. Objectives

Increase online sales, improve customer experience, automate order management, provide inventory visibility, enable corporate enquiries, improve SEO, and create a placement-quality engineering project.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

6. Stakeholders

Business Owner, Admin Team, Retail Customers, Corporate Buyers, Development Team, Payment Provider, Hosting Provider.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

7. User Personas

Retail customer, eco-conscious buyer, school procurement officer, corporate gifting manager, website administrator.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

8. Scope

In scope: ecommerce, admin dashboard, payments, analytics, bulk enquiry, responsive UI. Out of scope: marketplace, multilingual support, loyalty program (phase 2).

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

9. Functional Requirements

Product catalogue, categories, search, filters, pagination, cart, guest checkout, Razorpay, WhatsApp confirmation, inventory, dashboard, CRUD operations, analytics.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

10. Non-Functional Requirements

Responsive design, performance (<3s load), accessibility, SEO, scalability, maintainability, security, browser compatibility.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

11. Customer Journey

Visitor lands on homepage, explores products, adds to cart, enters shipping details, pays through Razorpay, order is verified, stock reduced, WhatsApp confirmation shared.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

12. Admin Journey

Admin authenticates, manages products, uploads images, updates stock, monitors orders, updates status, reviews analytics and enquiries.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

13. Screen Requirements

Detailed requirements for Home, Shop, Product Detail, Cart, Checkout, About, Sustainability, Contact, Bulk Orders, Dashboard, Products, Orders, Analytics, Settings.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

14. Business Rules

Shipping based on order value, guest checkout, stock cannot go negative, payment verification mandatory before order confirmation, only admins manage inventory.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

15. Success Metrics

Conversion rate, page load time, successful payment percentage, revenue growth, repeat visitors, SEO score, customer satisfaction.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

16. Risks

Payment failures, hosting outages, incorrect stock updates, security issues, image storage failures, dependency outages.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

17. Assumptions & Constraints

India-only launch, INR payments, Supabase backend, React frontend, limited development team, phased implementation.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

18. Future Enhancements

Wishlist, reviews, coupons, AI recommendations, invoices, multilingual support, mobile app, loyalty points.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

19. Acceptance Criteria

Every functional module has measurable completion criteria: successful checkout, admin CRUD, responsive UI, analytics, secure authentication, verified payments.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.

20. Appendix

Glossary, technology stack (React, Supabase, Node.js, Razorpay, Vercel, Render), references, revision history, implementation roadmap.

Detailed Notes

This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off. This section should be elaborated during implementation with business scenarios, UI references, acceptance criteria, edge cases, assumptions, validation rules, dependencies, KPIs, and traceability to technical requirements. The document is intended to act as the single source of truth for design, development, testing, deployment, and stakeholder sign-off.
